

2018 power storage capacity

Overview

Department of Energy, the United States had more than 25 gigawatts of electrical energy storage capacity as of March 2018. Battery storage systems store electricity produced by generators or pulled directly from the electrical grid, and they. Electricity is used to compress air at up to 1,000 pounds per square inch and store it, often in underground caverns. The primary data represented and synthesized in the 2018 Renewable Energy Data Book come from the publicly available data sources identified on page 142.
