

All-vanadium liquid flow solar container battery car

Overview

Self-contained and incredibly easy to deploy, they use proven vanadium redox flow technology to store energy in an aqueous solution that never degrades, even under continuous maximum power and depth of discharge cycling. Today the world is faced with the twin challenges of global warming and air pollution; this destructive combination is damaging and costly in terms of both human health. The vanadium redox battery (VRB), also known as the vanadium flow battery (VFB) or vanadium redox flow battery (VRFB), is a type of rechargeable flow battery which employs vanadium ions as charge carriers. They include this 5 MW array in Oxford, England, which is operated by a consortium led by EDF Energy and connected to the national energy grid. Modular flow batteries are the core building block of Invinity's energy storage systems. Imagine having a battery that lasts decades, scales effortlessly, and never catches fire.
