

Can hot compress be used for urine retention

Overview

The heat can promote improved urine flow and relieve discomfort associated with urinary retention. To use this method, apply a warm, moist towel or heating pad (set to low or medium heat) directly over your lower abdomen where your bladder is located, just above the pubic bone. Urine retention, also known as urinary retention, is a condition in which a person is unable to completely empty their bladder. For this purpose, our study showed that these patients had globular physical examination screening and postoperative 2-6. Can slapping a warm towel on your belly actually unclog the pipes?

Spoiler: It's not magic, but science might just back this grandma-approved hack.
