

# Capacitor grounding solar container

## Overview

---

Always use grounding lugs, clips, and other components that are specifically listed and certified for PV applications. These parts are designed to penetrate anodized coatings on module frames and maintain a secure connection despite thermal expansion and vibration over decades of. I have a solar power system consisting of 2 strings of 5 - 565w bifacial panels mounted to a shipping container via aluminum brackets to steel uni-strut mounted to steel square tubing welded directly to the container. This article covers grounding in PV systems, which differs slightly from standard grounding systems. Proper grounding is the foundation of a safe and durable solar photovoltaic (PV) system.
