

Coal mine high voltage solar container power supply requirements and standards

Overview

High-voltage circuits extending underground and supplying portable, mobile, or stationary high-voltage equipment shall contain either a direct or derived neutral which shall be grounded through a suitable resistor at the source transformers, and a grounding circuit . SUMMARY: This final rule revises the Mine Safety and Health Administration's (MSHA's) electrical safety standards for the installation, use, and maintenance of high-voltage continuous mining machines in underground coal mines. 830(a) (relating to splicing and repair of trailing the conti ions of 30 CFR 75. Where mining operations are concerned, in the vast majority of cases the voltage will be 20 to 35 kV, which meets the needs of most mines with respect to both consumption and distance.
