

Corolla hybrid solar container device failure

Overview

It has stopped working twice now saying Hybrid System malfunction and parking system malfunction. I had it towed to a mechanic shop and we replaced the battery because it was low and they scanned the engine and. It has the same engine and hybrid powertrain as the Prius, but comes in a more attractive and unassuming sedan body style. So this is where I'm up to today, currently no reoccurrences of the 'hybrid malfunction' in over a month, but I'm still having the starting issues as described at the start of this post (these may or may not be related).
