Overview

Capacitor energy storage seam welding (CESW) uses high-capacity capacitors to store electrical energy and release it in milliseconds, creating seamless, ultra-precise welds [2] [5]. This results in quicker, more precise welds, reducing production time and increasing efficiency. Spot welding relies on the principle of metal resistivity to heat and fuse metal. What is a capacitor discharge welder?

A Capacitive Discharge Welder, also known as CD Welder, is a type of welding machine that utilizes a high-voltage capacitor to discharge a short pulse of electrical energy into the weld zone.
