

Disadvantages of small-scale solar container

Overview

All solar photovoltaic systems are green, but small-scale rooftop solar emits less greenhouse gases over a lifetime than all of the types of large-scale solar farms. PV power plants and concentrated solar power (CSP) plants, for example, emit greenhouse gases over the summer months, or as a long-term realized systems that store electricity near demand centers. Unlike traditional central power plants, solar energy is intermittent and fluctuates in power generation [13, 14]. Toxic and carcinogenic substances, heart and liver problems, lung cancer, throat infection, nausea, vomiting, reduced blood cells, dark and red spots on skin, hands and feet etching. Pre-fabricated containerized solutions now account for approximately 35% of all new utility-scale storage deployments worldwide. There are some downsides to solar energy that demand your attention before considering them as a replacement for the currently used energy sources today.
