

# Distributed power generation system solar container device

## Overview

---

With the world moving increasingly towards renewable energy, Solar Photovoltaic Container Systems are an efficient and scalable means of decentralized power generation. Distributed power generation solar, these containers offer a self-sustaining power solution. Distributed generation, also distributed energy, on-site generation (OSG), [1] or district/decentralized energy, is electrical generation and storage performed by a variety of small, grid-connected or distribution system-connected devices referred to as distributed energy resources (DER). These containers are revolutionizing the way solar energy is deployed, particularly in remote areas, disaster relief zones, military. Whether you're managing a construction site, a mining operation, or an emergency.
