

Electric mosquito swatter solar container capacitor capacity

Overview

The charged super farad capacitor can replace a battery and provide a power supply for the electronic mosquito swatter. A solar-powered mosquito trap is developed in this study to attract mosquitos into the trap by sucking them toward a shock net while they are drawn to an SMD LED light. The utility model discloses a capacitance energy-storage electric shock mosquito-killing device, which is characterized in that diodes D1, D2 are connected into a duplication voltage rectification form, a capacitor C1 is connected with a capacitor C2 in series, a resistor R3 is connected with a. It provides a convenient and effective Another important component is the adjustable capacitor, often sourced from reputable brands like. It consists of four major part : a charging circuit,oscillator,transformer,and voltage multiplier. Buying skills of electric mosquito swatter When purchasing an electric mosquito swatter, first, pay attention to whether there is information such as the implementation standard number, production a?
