

# Electric vehicle solar container battery pack structure

## Overview

---

Each module (carton) holds a bunch of cells (eggs), and the crate is the pack. This “cells→modules→pack” design made it easy to swap or scale capacity by adding or removing modules. The required battery pack is a big, heavy, and expensive component to be located, managed, climatized, maintained, and protected. Regulators (EU, China) and OEMs are also raising safety, recycling and traceability requirements — and new cell chemistries (including rapid advances in solid-state R&D) are reshaping pack architecture choices. The four primary components of the battery package’s mechanical structure design process are parameter determination, structural initial design, optimization of simulation analysis, and physical construction experimental analysis.

### Home Energy Storage (Stackble system)

- High Efficiency
- Easy installation
- Safe and Reliable
- Perfect Compatibility

**Product Introduction**

- Scalable from 10 kWh to 50 kWh
- Self-Consumption Optimization
- Integrated with inverter to avoid the compatibility problem
- LFP battery, safest and long cycle life
- Stackable design, effortless installation
- Capable of high-powered
- Emergency-Backup and Off-Grid Function

### Knowledge about battery energy storage container and ...
