

# Electrochemical solar container power station has the following solar container methods

## Overview

---

Our hybrid systems leverage core technologies like DC-coupled architecture (system efficiency up to 98.5%) and VSG (Virtual Synchronous Generator) technology (seamless switching within 10ms), prioritizing solar energy, intelligently managing storage, and activating diesel backup only. Think of these containers as layered energy cakes – each layer serving a specific function: "The true innovation lies in the integration – it's not just batteries in a box, but a complete ecosystem that thinks for itself." – Energy Storage Engineer, EK SOLAR

When a 200MW solar plant in Chile faced the challenge of providing power to remote locations, the Department of Energy Office of Electricity Delivery and Energy Reliability Energy Storage Program would like to acknowledge the innovative solution provided by LZYS. What is LZYS's mobile solar container?

This is the product of combining collapsible solar panels with a reinforced shipping container to provide a mobile solar power system for off-grid or remote locations. Unlike standard solar panel containers, LZYS's mobile unit features a retractable solar panel. It is the perfect alternative to unstable grid power and diesel generators, keeping operations running even in remote areas or where infrastructure is weak.
