

Georgia pumped hydro solar container project plant operation information

Overview

The project consists of an oblong upper reservoir constructed near the top of Rocky Mountain and a lower reservoir with a power plant, containing three pump/turbines, capable of producing 385 megawatts each, for a total of 1,140 megawatts, making it the seventh largest pumped . Georgia pumped hydro energy storage proj back to the lower reservoir via a powerhouse for hydropower generation. The Rocky Mountain Hydroelectric Plant is a pumped-storage power plant located 10 miles (16 km) northwest of Rome in the U.
