

# Gravity mechanical solar container system includes

## Overview

---

The system consists of a tall sealed chamber containing a heavy internal mass, dual fluid reservoirs, and integrated turbine and generator units. Gravity energy storage systems (GESS) for grid support and renewable energy integration. By elevating masses, electricity is stored as gravitational potential energy, expressed as  $E = m \times g \times h$  (mass  $\times$  gravitational acceleration  $\times$  height). This mechanical approach to energy storage perfectly complements solar installations across Illinois's varied climate, providing consistent power through extreme weather events and grid outages. The lightweight, ecologically-friendly aluminium rail system guarantees a mobile solution with rapid availability.
