

# How long can a 30-degree off-grid solar container battery last

## Overview

---

In real homes, off grid batteries made with LiFePO<sub>4</sub> typically last about 8-15 years ( $\approx$ 3,000-6,000 cycles), while quality lead-acid averages  $\sim$ 3-5 years. Lifespan hinges on depth of discharge, temperature, charging profile, and system sizing. That's based on how many charge and discharge cycles it can handle before losing a significant amount of capacity. Picking the right solar battery size helps store more solar energy and keeps power on. Use correct charger profiles; periodic capacity tests; firmware/BMS updates Can I run my home off solar. Undersized battery banks lead to power shortages during cloudy days or high-demand periods, while oversized banks waste money and space.
