

# Innovative pumped storage technology

## Overview

---

Based on the review performed in this study, several promising innovative PSH technologies have been identified: submersible pump-turbines and motor-generators, geomechanical PSH, open-pit mine PSH, and hybrid PSH technologies. In April 2019, WPTO launched the HydroWIREs Initiative<sup>1</sup> to understand, enable, and improve hydropower and pumped storage hydropower's (PSH's) contributions to reliability, resilience, and integration in the rapidly evolving U.S. In response to rising demand and the challenges renewables have added to grid balancing efforts, the power industry has seen an uptick in. Battery Storage Dominance with Rapid Cost Decline: Lithium-ion batteries have become the dominant energy storage technology, with costs falling over 85% since 2010 to \$115/kWh in 2024. This dramatic cost reduction, combined with 85-95% round-trip efficiency and millisecond response times, has made. A new international assessment of long-duration energy storage (LDES) finds that pumped storage hydropower remains the most widely deployed and market-ready option across major economies, even as governments explore a growing mix of alternative storage technologies.
