

International energy agency solar container forecast

Overview

The IEA's flagship World Energy Outlook (WEO) is the most authoritative source of global energy analysis and projections. Updated annually to reflect the latest energy data, technology and market trends, and government policies, it explores a range of possible energy futures and their implications. The International Energy Agency (IEA) cut its 2025–30 renewables forecast by 5%, citing lower solar additions, though PV still represents nearly 80% of 4. Between IEA, BNEF and S&P Global, the prognosis for solar growth is optimism, with a dash of caution, as all three have predicted a slowdown linked primarily to China numbers in 2026. As we approach 2026, the global solar market is entering its most complex phase yet. This marks another record year for PV deployment, despite continued overcapacity in manufacturing and falling module prices that placed pressure on the entire.

International energy agency solar container forecast

World Energy Outlook 2025 - Analysis

Updated annually to reflect the latest energy data, technology and market trends, and government policies, it explores a range of possible energy futures and their implications for energy security, ...

Renewable electricity - Renewables 2022 - Analysis

Ambitious renewable energy targets in the 14th Five-Year Plan, market reforms and strong provincial government support provide long-term revenue certainty for renewables. The main-case forecast ...

Global Solar Capacity In 2026

2. IEA: Steady, but Revised Growth The International Energy Agency numbers also predict an overall decline of the net solar addition capacity for 2026, as per its Renewable Energy Progress ...

World Energy Outlook 2025

This study was prepared by the World Energy Outlook (WEO) team in the Directorate of Sustainability, Technology and Outlooks in co-operation with other directorates and offices of the International ...

Solar Container Market Share, Growth, Future Prospects, Forecast to ...

Solar container market was valued at \$220.0 million in 2024 and is projected to reach \$2,148.3 million by 2035, growing at a CAGR of 23.0% during the forecast period (2025-2035).

Renewables 2025

Solar PV accounts for almost 80% of the global increase, followed by wind, hydropower, bioenergy and geothermal. In more than 80% of countries worldwide, renewable power capacity is set to grow faster ...

IEA lowers 2026 oil glut forecast for first time since May

The International Energy Agency trimmed its forecast of next year's global oil supply glut for the first time since May on Thursday, flagging higher ...

IEA forecasts over 4,000GW of global photovoltaic (PV)

In its flagship report Renewables 2024, the agency forecasts that between 2024 and 2030, more than 5500 GW of new renewable energy capacity will be installed globally, bringing the ...

IEA trims renewables outlook as US policy shifts and China auction

PARIS, Oct 7 (Reuters) - The International Energy Agency on Tuesday cut its global forecast for renewable power growth by 2030 by 248 gigawatts from last year's outlook, citing weaker

Renewable electricity - Renewables 2022 - Analysis

Ambitious renewable energy targets in the 14th Five-Year Plan, market reforms and strong provincial government support provide long-term revenue certainty for ...

IEA cuts estimate of U.S. renewables capacity growth by about 50%

The International Energy Agency expects global renewable power capacity will double by 2030, increasing by 4.6 TW, but anticipated U.S. deployments shrank by half since last year.
