

Introduction to the function of solar container inverter

Overview

A solar inverter is essentially a device that converts DC (direct current) electricity—the electricity your solar panels generate—into AC (alternating current) electricity, which is what your home, business, or off-grid system actually operates on. Here's a clue: without a solar inverter, all of those shiny panels on your roof—or on a solar container—wouldn't power so much as a coffee brewer. In the world of solar energy systems, inverters are often referred to as the brains of the operation.
