Overview

Reactors use boiling water heating and is designed with fully explosion proof components. Online process GCs as well as time resolved IR-analytics provide continuous online data on reactor yields and conversions. They produce electricity from the fuel in the fuel cartridge (methanol), supplemented by oxygen from the air. A 2nd room has compressors and chillers for infrastructure and the first room is th. As technology continues to advance and adoption expands globally,th ions for generating and storing solar power.
