

National standard for solar container materials

Overview

SEIA standards apply to solar and energy storage sourcing, manufacturing, transportation, design, installations, operations, and recycling. NFPA is keeping pace with the surge in energy storage and solar technology by undertaking initiatives including training, standards development, and research so that various stakeholders can safely embrace renewable energy sources and respond if potential new hazards arise. The safe and reliable installation of photovoltaic (PV) solar energy systems and their integration with the nation's electric grid requires timely development of the foundational codes and standards governing solar deployment.
