

New progress in flow battery solar container

Overview

Scientists have developed a high-current density water-based battery that can be suitable for residential use. The next-generation “flow battery” could help households store rooftop solar energy more safely, cheaply, and efficiently than ever before, according to researchers. Flow batteries are emerging as a transformative technology for large-scale energy storage, offering scalability and long-duration storage to address the intermittency of renewable energy sources like solar and wind. It is therefore a very fast-growing sector: according to European Union estimates, it is set to grow by 20% per year in the near future, rising from 12 GWh today to at least 45 GWh by 2030. A growing slice of this market is taken up by long-life storage systems (8-10 hours or more), which are. Lithium-ion batteries dominate the headlines, but a quieter revolution is brewing – and it’s flowing.
