

# Nuclear power application solar container technology

## Overview

---

Small modular reactors and microreactors with power generation capacities below 20 megawatts (MW) could help power up remote locations with clean energy. In the integrated energy system, the concentrating solar power plant—specifically, its built-in thermal storage—would provide that enhanced flexibility. Integrating solar collectors with other energy sources is common, as seen in domestic heating, where solar collectors are combined with common heaters to reduce fuel consumption (gasoline, electricity, gas, and biomass) and therefore, the energy cost. Classification society DNV has awarded HD Korea Shipbuilding & Offshore Engineering (HD KSOE) an Approval in Principle (AiP) for a new 15,000 TEU container vessel design powered by Small Modular Reactor (SMR) technology. The LZY-MS1 Sliding Solar Container provides 20-200kWp solar power with 100-500kWh battery storage.
