

Phase change solar container and the oil industry

Overview

In general, it is recommended to use solar energy systems integrated with latent thermal storage, i. To address the issues of high energy consumption and operating costs in the temperature maintenance and heating of floating roof oil tanks, a phase-change temperature maintenance simulation system using a solar source-sewage source heat pump was designed. Solar water heater, PCM paraffin wax, heat exchangers, crude oil, and other materials were used. The research mainly focused on setting up accurate CFD models in ANSYS fluent of various designed systems.
