

# Phase change solar container material feasibility report

## Overview

---

This paper briefly reviews recently published studies between 2016 and 2023 that utilized phase change materials as thermal energy storage in different solar energy systems by collecting more than 74 examples from the open literature. The use of phase change materials is one of the potential methods for storing solar energy (PCMs). The latent heat storage capable material is anchored onto a container and possibly charged and discharged with adjusting  $118^{\circ}\text{C}$  by from 11 minutes of heating with the efficiency of 78.
