

# Physical solar container method

## Overview

---

Solar containers are pre-engineered, mobile energy solutions housed within standard ISO shipping containers (10ft, 20ft, or 40ft). By integrating all necessary equipment within a transportable structure, these units provide modular, plug-and-play renewable energy systems. With the world moving increasingly towards renewable energy, Solar Photovoltaic Container Systems are an efficient and scalable means of decentralized power generation. As the photovoltaic (PV) industry continues to evolve, advancements in methods to solve the physical solar container problem have become critical to optimizing the utilization of renewable energy sources.
