

Profit model of independent solar container and frequency regulation

Overview

From Australia's Hornsby efficiency and grid creating value at every twist and turn of the power curve. The results indicate that PV storage systems effectively mitigate system peak loads, thereby enabling conventional generators to fulfill the requisite energy demand for DA UC while maintaining the minimum contingency margin and preventing overload. In order to clarify the frequency stability situation of power system when photovoltaic participates in frequency regulation, this paper first establishes the load frequency control (LFC) model of the power system with photovoltaic based on the analysis of the traditional LFC model of the power. Does load frequency control improve stability and performance in multi-area power systems?
