

Proportion of o

Overview

Approximately 37% to 42% of the world's population has the O Positive (O+) blood type, which is the single most prevalent type worldwide. Type O blood is defined by the genetic absence of both A and B antigens on the surface of red blood cells. Before we can use the calculator, it's important to understand what a proportion is and how to solve proportions by hand. The list below shows the percentage of donors with each blood type: Data accurate at February 2025.

Proportion of o
