

Pumped hydroelectric storage and electrochemical solar container equipment manufacturing

Overview

This report reviews California's electricity storage needs and whether pumped hydroelectric storage (pumped storage) can help to serve those needs cost effectively. As an industry leader in pumped storage plant design and upgrades, Stantec offers a full range of services to address the issues that face project developers and owners—from planning and design to environmental acceptability and economic soundness through construction. Pumped-storage hydroelectricity (PSH) is gaining momentum globally as a large-scale energy storage system for a sustainable future. As multi-functional power plants, pumped storage facilities have a high potential to meet this challenge, because their technology is based on the only long-term, technically proven and cost-effective form of storing energy on a large scale, thereby making it available at short notice.
