

Research on the problems and countermeasures of oilfield solar container

Overview

Therefore, this paper comprehensively uses literature progress, industry reports, core data, analytical test data, numerical simulation and economic evaluation models to systematically analyze the current status of heavy oil thermal recovery and solar thermal technology. It is of great significance to integrate with solar thermal technology to achieve green and efficient development of heavy oil. How to overcome the challenges posed by ambient condition on solar PV panels?

These challenges provide research opportunities to overcome these issues. The Oil and Gas Climate Initiative is a CEO-led organization bringing together 12 of the largest oil and gas companies worldwide to lead the industry's response to climate change. Abstract - This paper presents a case study for a recent Company approved offshore oil and gas development project aims to install 19 platforms with off-grid photovoltaic (PV) and battery systems for economic and decarbonization purposes. All the solar panels, inverters, and storage in a container unit make it scalable as well as small-scale power solution.

Product Model
HJ-ESS-215A(100KW/215KWH)
HJ-ESS-115A(50KW 115KWH)

Dimensions
1600*1280*2200mm
1600*1200*2000mm

Rated Battery Capacity
215KWH/115KWH

Battery Cooling Method
Air Cooled/Liquid Cooled
