

# Safety distance of solar container equipment

## Overview

---

5 of NFPA 855, we learn that individual ESS units shall be separated from each other by a minimum of three feet unless smaller separation distances are documented to be adequate and approved by the authority having jurisdiction (AHJ) based on large-scale fire testing. Learn safety standards, thermal management tips, and how EK SOLAR optimizes global installations. Proper spacing between energy storage containers isn't just about fitting equipment - it's about fire safety, thermal efficiency, and long-term ROI. The National Electric Code (NEC), published by the National Fire Protection Association (NFPA) and officially designated as NFPA 70, sets the standards for electrical safety and performance and provides a comprehensive framework that photovoltaic and other renewable energy projects must follow. Europe follows closely with 32% market share, where standardized container designs have cut installation timelines by 60% compared to traditional.
