

Single-phase solar container grid-connected control

Overview

This study comprehensively analyzes a control technique employed in a single-phase grid-connected photovoltaic (PV) system. PI, PR, DQ, and Hysteresis controllers are the different control methods used for the analysis. Grid-connected reactive-load compensation and harmonic control are becoming a central topic as photovoltaic (PV) grid-connected systems diversified. This research aims to produce a high-performance inverter with a fast dynamic response for accurate reference tracking and a low total harmonic.
