

# **Solar container company domain proxy**

## Overview

---

Learn how to configure Docker to work behind corporate proxies, including HTTP/HTTPS proxy settings for the Docker daemon, containers, and image pulls. Corporate networks often require all traffic to pass through a proxy server. How can I set up local domain names for my docker containers without exposing them to the internet, ex reverse proxy?

Basically I want to be able to go to (or something else) and open the deluge web ui. Before this, I was using Nginx Proxy Manager, which works great if you're using verified public.
