

Solar container grid ancillary services include

Overview

These five Ancillary Services are: Regulation (Regulation Up, Regulation Down), Responsive Reserve Service (RRS), Non-Spin Reserve Service (Non-Spin), and ERCOT Contingency Reserve Service (ECRS), which was implemented in June 2023 as the first daily procured Ancillary Service. The key ancillary services offered by energy storage systems include regulation and reserves. Regulation services help balance the supply and demand of electricity on short notice, ensuring the grid remains stable. Reserve services, on the other hand, provide backup power to compensate for unexpected.
