

# Solar container how is light energy stored

## Overview

---

Solar energy can be stored primarily in two ways: thermal storage and battery storage. Thermal storage involves capturing and storing the sun's heat, while battery storage involves storing power generated by solar panels in batteries for later use. Before we explore how it works, let's first get to know the common types of solar energy containers. Given the relatively large upfront costs involved, choose a storage solution you expect to last a long time.
