

# Solar container inductor saturation

## Overview

---

Also you need to take account of the length of the magnetic field through the core. These properties are: saturation  $B_s$ , permeability is often misunderstood and can be troublesome. Choosing an inductor for your power supply includes considering many parameters like DC resistance (DCR), rated current and saturation current. Inductors, as key components in electronic circuits, can be classified into various types based on structure, manufacturing process, and application. Also, mag-amp post-regulators in switching power supplies rely on controlling the saturation point of an inductor to post-regulate the duty cycle of the pulse train, to achieve good cross regulation on unregulated windings.
