## Overview

---

Containerized energy storage system uses a lithium phosphate battery as the energy carrier to charge and discharge through PCS, realizing multiple energy exchanges with the power system and connecting to multiple power supply modes, such as photovoltaic array, wind energy, power. We combine high energy density batteries, power conversion and control systems in an upgraded shipping container package. Lithium batteries are CATL brand, whose LFP chemistry packs 1 MWh of energy into a battery volume of 2. A lithium-ion solar battery (Li+), Li-ion battery, "rocking-chair battery" or "swing battery" is the most popular rechargeable battery type used today. Today, most homes and businesses use lithium-ion solar battery technology to store energy safely and efficiently.
