

## Overview

---

ah top quality solution that one Check "route print" from cmd and ensure it's correct. I tried disabling firewalls on the host and container, but still unable to get a ping. However, there's one catch: this PC can't be pinged from other devices within that same subnet. 7:10000 I was able to do this before, but by changing a subnet I must have forgotten a parameter somewhere when.

## Solar container pcs cannot be pinged

---

 LFP 48V 100Ah

### Container cannot ping local network, but can ping gateway and host

From the container, I can ping the Docker host (10.0.0.100/24), my gateway (10.0.0.1/24), and things on other subnets (10.0.2.1/24), but not anything else on the same subnet as my host. The ...
