

Solar container power station preventive safety work

Overview

This checklist aims to help identify the potential hazards to workers' safety and health from small-scale and domestic solar energy systems, covering all stages of their life cycle, from manufacturing, installation and maintenance to decommissioning and recycling. In addition to this manual, attending ongoing OSHA and other safety courses can build. NFPA 70 (design and installation), 70B (maintenance), and 70E (safety) work together to result in the greatest system safety and reliability. This report is available at no cost from the National Renewable Energy Laboratory (NREL) at National Renewable Energy Laboratory, Sandia National Laboratory, SunSpec Alliance, and the SunShot National Laboratory Multiyear Partnership (SuNLaMP) PV O&M Best Practices. Employers working in the solar energy business need to protect their workers from workplace hazards and workers need to understand how to protect themselves from hazards. Learn about safe layouts, fire protection as versatile and efficient energy solutions.
