

# Solar container socket model

## Overview

---

This manual addresses why these sorts of boxes are replacing remote power supply, what the components of the whole system are, how to wire and install it safely along with handy facts, industry jargon and best-practice references. Make the next step towards renewable energy with our Solarcontainer! The challenges of our time are more present than ever. That is why we have developed a mobile photovoltaic system with the aim of achieving maximum use of solar. Install copper-clad ground rods at least 8 feet deep and connect them to your solar array frames, inverter, and battery bank using 6 AWG copper wire. Grounding off-grid solar systems also requires bonding all metal components together, including module frames, mounting racks, and combiner boxes. RPS supplies the shipping container, solar, inverter, GEL or LiFePo battery bank, panel mounting, fully framed windows, insulation, door, exterior + interior paint, flooring, overhead lighting, mini-split + more customizations! RPS can customize the Barebones and Move-In Ready options to any design. This solution lets you avoid any significant power drops during the day thus get the most out of your panels.

## Solar container socket model
