## Overview

---

At the heart of every BESS are three critical components that ensure its safe, efficient, and reliable operation: the Battery Management System (BMS), Energy Management System (EMS), and Power Conversion System (PCS). These three systems work in perfect synergy to ensure the safety, stability, and efficiency of energy. BMS (Battery Management System) The Battery Management System (BMS) ensures the safe, efficient operation of batteries by measuring critical parameters such as voltage, current, and temperature, while managing charging cycles to extend battery life. An EMS needs to be able to accommodate a variety of use cases and regulatory environments. Adding Containerized Battery Energy Storage System (BESS) to solar, wind, EV charger, and other renewable energy applications can reduce energy costs, minimize carbon footprint, and increase energy efficiency. [pdf] The global solar storage container market is experiencing explosive growth, with demand.
