

Supercapacitor solar container charging and discharging efficiency

Overview

Modeling the dynamic behavior of supercapacitors in a solar energy system with an emphasis on their charging and discharging properties under various solar irradiance circumstances is the goal of the research. A solar supercapacitor, also known as a photovoltaic (PV) supercapacitor, is a device that combines the energy generation capabilities of solar cells with the superior energy storage and fast charging characteristics of supercapacitors. Jeongmin Kim, Senior Researcher at DGIST (President Kunwoo Lee), in joint research with Damin Lee, Researcher at the RLRC of Kyungpook National University (President.
