

# **The top floor of the solar container building**

## Overview

---

He had already stacked containers two and three stories, but with his Ida apartment complex, Brian Stark went 85 feet high with 64 containers (on top of two floors of concrete culverts) to create North America's tallest container building. In the case of the recently opened IDA on McKinley, it's literal: At six stories, it is the tallest shipping container building in the country, but its display of sustainable living is what Stark hopes puts downtown Phoenix's latest cargotecture project on the map. Embrace off-grid living with The Trailblazer, a spacious 640 square foot shipping container house designed to be your dream home. This fully self-sufficient retreat offers a robust solar system, rainwater collection, and energy-efficient appliances, allowing you to live comfortably. The vibrant blue exterior stands out amidst the natural landscape, while solar panels and a wind turbine on the roof power this innovative retreat.

## The top floor of the solar container building
