

Water storage in south african business parks

Overview

Water scarcity and efficient storage solutions remain critical challenges for industries across South Africa. Whether addressing the needs of agriculture, manufacturing, or urban infrastructure, the demand for innovative, durable, and customizable water storage . As the precious resource of water remains contentiously in the spotlight, experts from WSP in Africa's Property & Buildings team share their collective insights on the ripple effects of water shortages on properties and businesses, as well as proactive protection measures. To overcome the uneven spread of water resources and to manage floods and drought, more than two thirds of the country's mean annual rainfall is currently stored in dams. Through a four-phased approach, the Water Stewardship SOPs support industrial parks, including park tenants, to holistically view their interaction with water, establish actions.
