

What are the classification standards for solar container field business types

Power Conversion System

- Single-stage three-level modularization
- Multi-branch input to reduce battery series and parallels connection

Overview

Commodity classifications are used to categorize the contents of storage occupancies so that the appropriate sprinkler system design can be identified. Most major industry classification systems use sources of revenue as their basis for classifying companies into specific sectors and industries. In order to group like companies based on their sustainability-related risks and opportunities, a new industry classification was needed. There are several types of solar systems designed specifically for shipping containers, including off-grid systems, grid-tied systems, and hybrid systems.
