

# What is the air cooling method of solar container

## Overview

---

Air cooling is the most widely used thermal management method in small to medium BESS setups. Among the various methods available, liquid cooling and air cooling stand out as the two most common approaches. Our winters last from December through February, during which outside air temperatures average around 20°F with a record low of -28°F. Some season extension techniques, such as hoop houses and cold frames, can allow for growing cold-weather crops late into the.
