

# Who provides the benefits of solar container ancillary services

## Overview

---

These services can be provided by grid users, such as conventional power plants, renewable energy sources (RES), storage units, or flexible loads, to support or ensure a secure and reliable power system operation. Regulation services help balance the supply and demand of electricity on short notice, ensuring the grid remains stable. Therefore, PV systems and PV hybrids need to take over more and more system responsibility by providing ancillary services. Grid system operators use ancillary services to ensure reliable operations of the grid. Ancillary services are the services (other than energy) required by system operators to ensure reliable operation of the electric grid. A containerized BESS is a fully integrated, self-contained energy storage solution housed within a standard shipping container.
